

Symantec™ Endpoint Protection for Windows® XP Embedded 5.1

Protection for Windows XP Embedded and Windows® Embedded for Point of Service (WEPOS) platforms

Overview

Symantec Endpoint Protection for Windows XP Embedded 5.1 offers advanced defense against hackers and worms, Trojan horses, viruses, and other malicious code attacking and infecting embedded devices based on Windows XP Embedded platforms. These specialized devices, such as POS terminals, self-service kiosks, ATMs, thin clients, and medical devices often have little or no protection against today's increasing threats. The Symantec solution provides a multilayered security approach, including antivirus, an application-centric firewall, application control, intrusion prevention and detection, and policy enforcement, which protects Windows XP Embedded or WEPOS devices from being compromised by either inbound or outbound traffic.

Key benefits

- Helps protect WEPOS and Windows XP Embedded devices from Trojan horses, viruses, worms, and other malicious code
- Enables scalability and maximizes efficiency with centralized management console that effectively deploys, manages, and reports agent activity
- Offers unified and central reporting, reducing administrative burden with single agent

- Designed specifically for embedded devices with limited hard drive or flash memory size, optimizing system performance
 - Supports redundancy and load balancing with highly scalable management system
 - Provides advanced protection with ability to save policies and signature updates even when Enhanced Write Filter is enabled
 - Lowers the total cost of ownership by providing endpoint protection for internal devices and business
-

Features

- Centralized management console—to manage your solution effectively
- Antivirus support for protection against viruses and online threats
- Application-centric firewall to lock down an endpoint
- Intrusion prevention and detection features to identify and block known and unknown attacks
- Small footprint to enable optimized deployment and performance
- Microsoft® Target Designer integration for building new system images
- Customizable UI options for ease of use

System requirements

Symantec™ Endpoint Protection for Windows XP

Embedded 5.1

Hardware requirements

- Intel® Pentium® processor 133 or equivalent
- 128 MB RAM
- 40 MB free disk space
- TCP/IP protocol installed

Software requirements

Windows XP Embedded dependencies:

- Internet Explorer
- TCP/IP networking
- COM base
- IP security services
- NDIS & NDIS user-mode I/O driver
- OLE dialog interfaces
